MITRE / FLUX NOTES **SELECTED CONCEPTS v13.9 (CONTEXT TRAY + MEDICATIONS)**
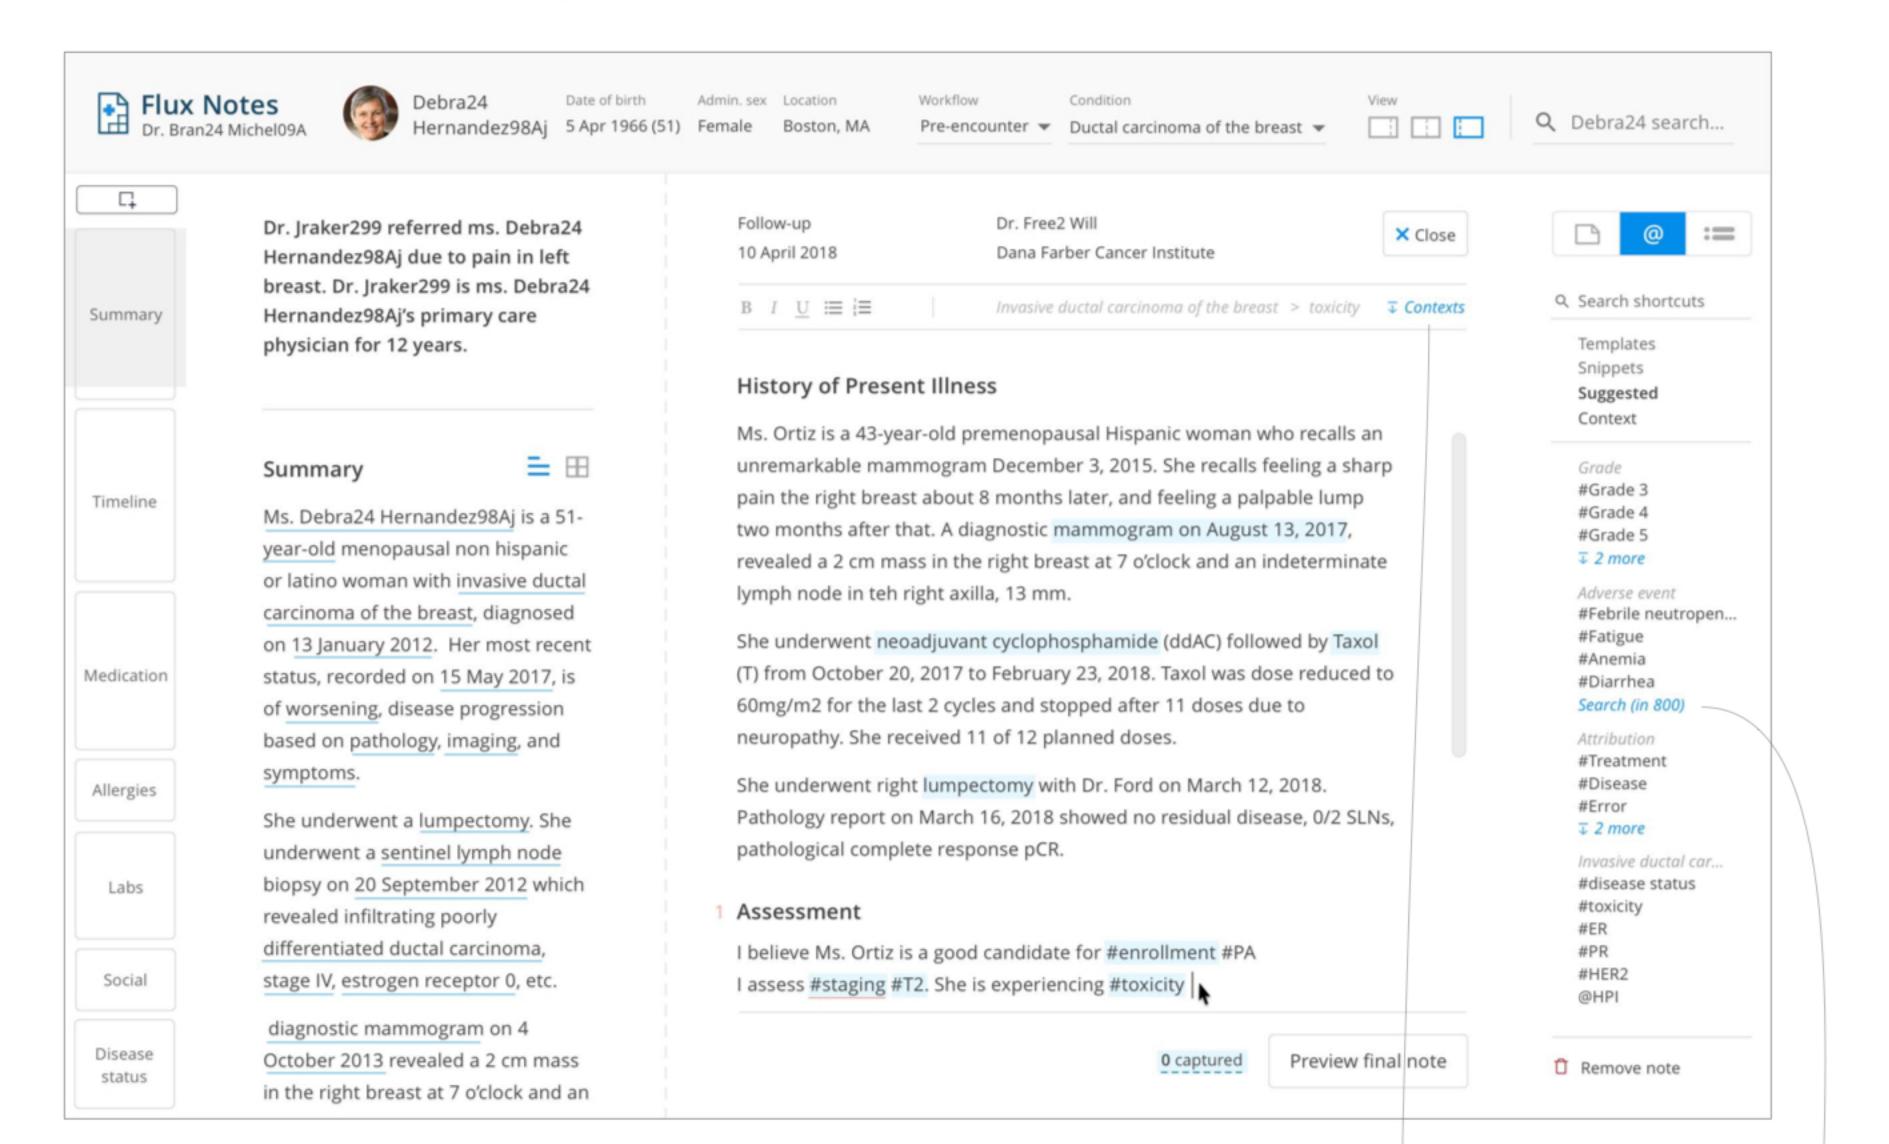

EDWIN CHOI, DANIEL REEVES, JUHAN SONIN, 11.MAY.2018

goinvo

The following are concepts that explore the context tray and medication view within Flux Notes.

## 1 CLINICAL NOTE CONTEXT TRAY
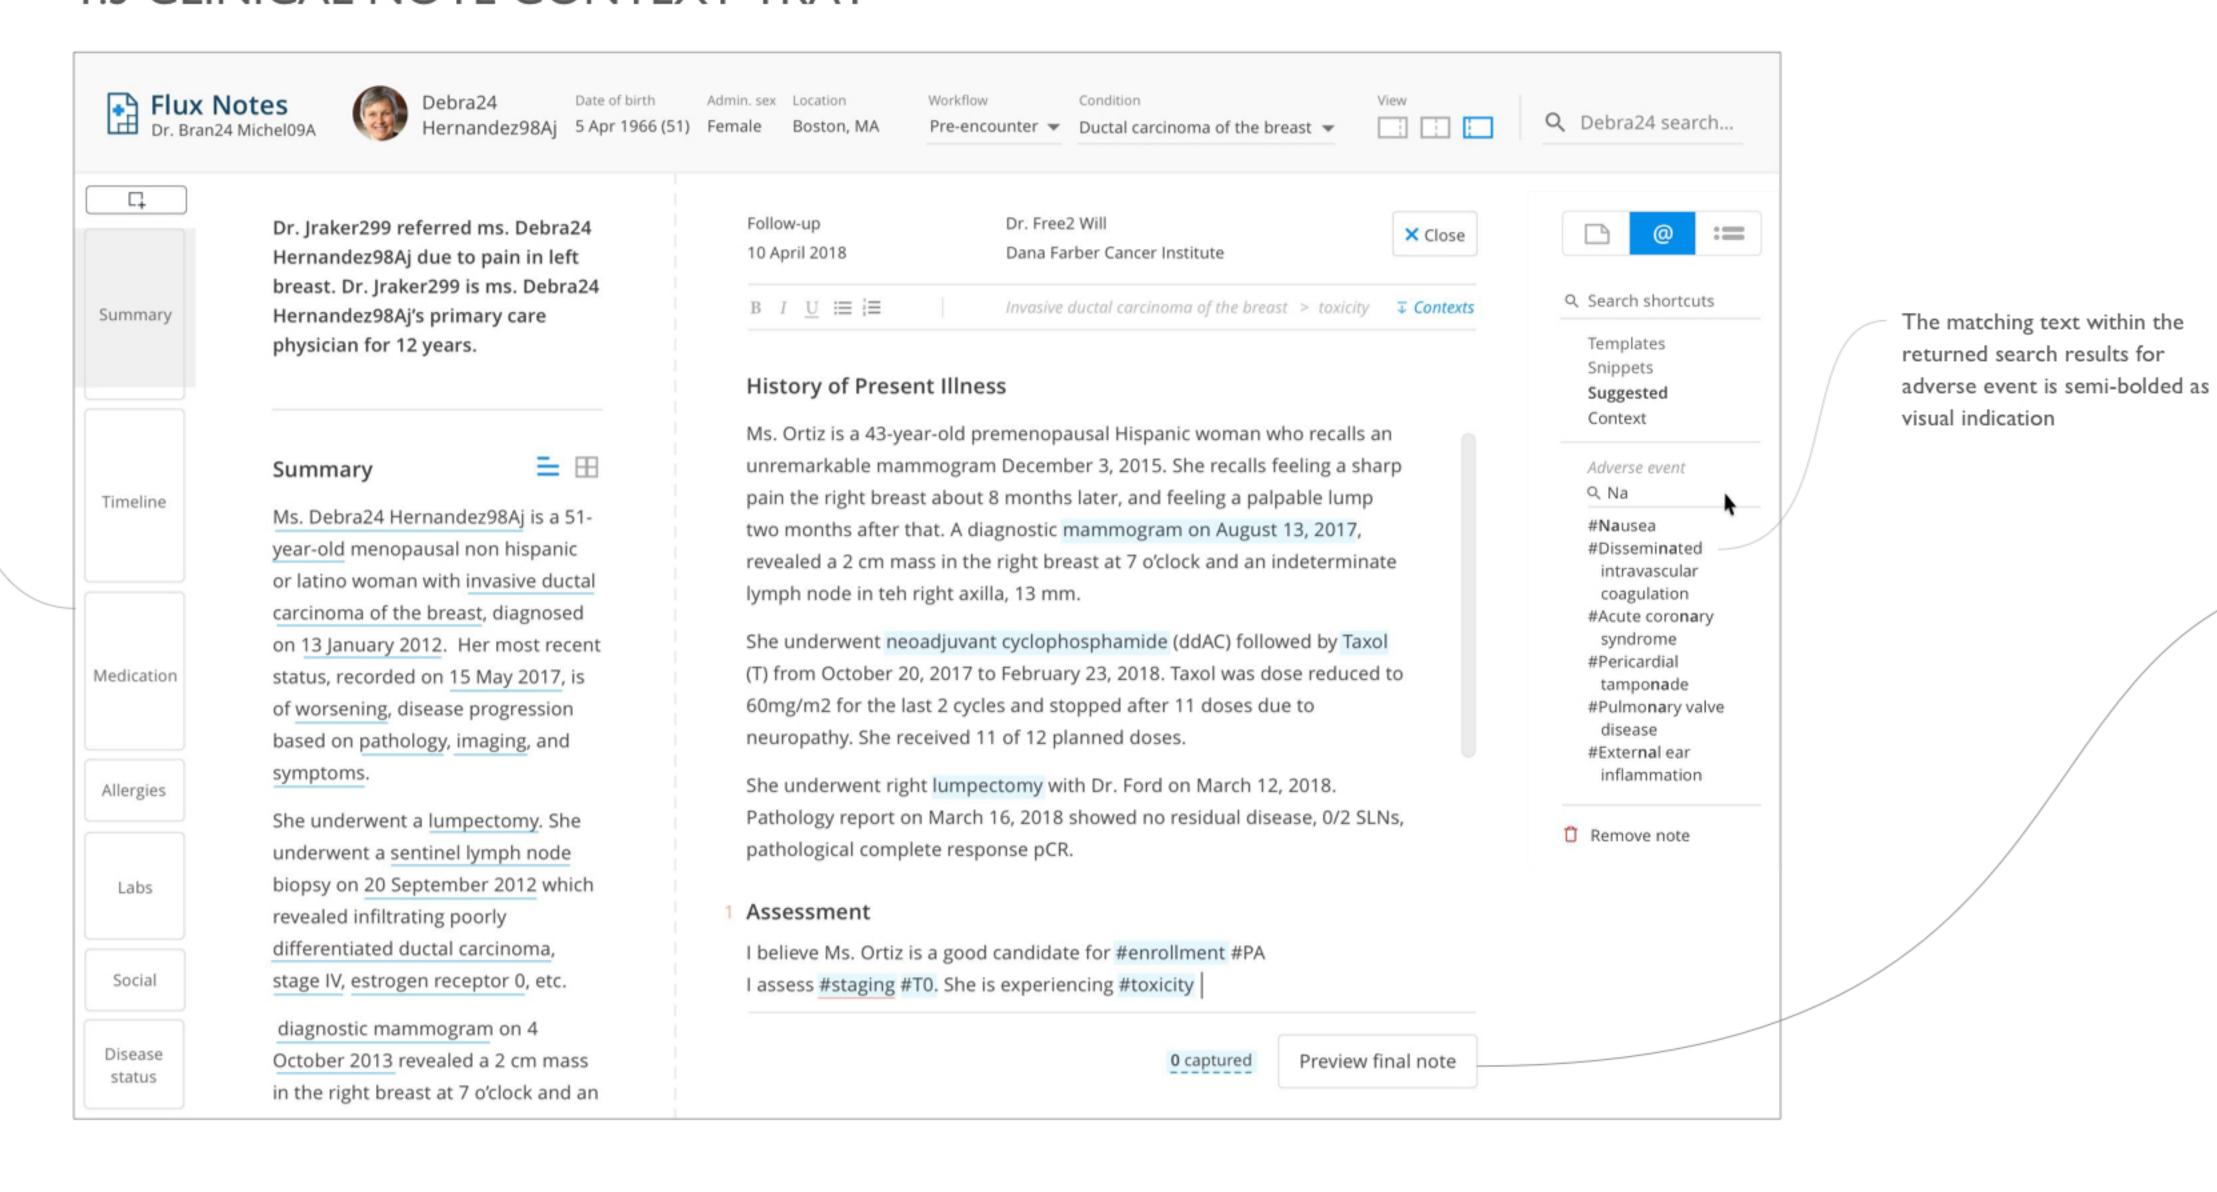

1.1 CLINICAL NOTE CONTEXT TRAY

The breadcrumb displays only the current context the user is in as determined by the text next to the current cursor location. It displays one context at a time in order to avoid the complex user experience that arises when keeping a long list of multiple contexts.
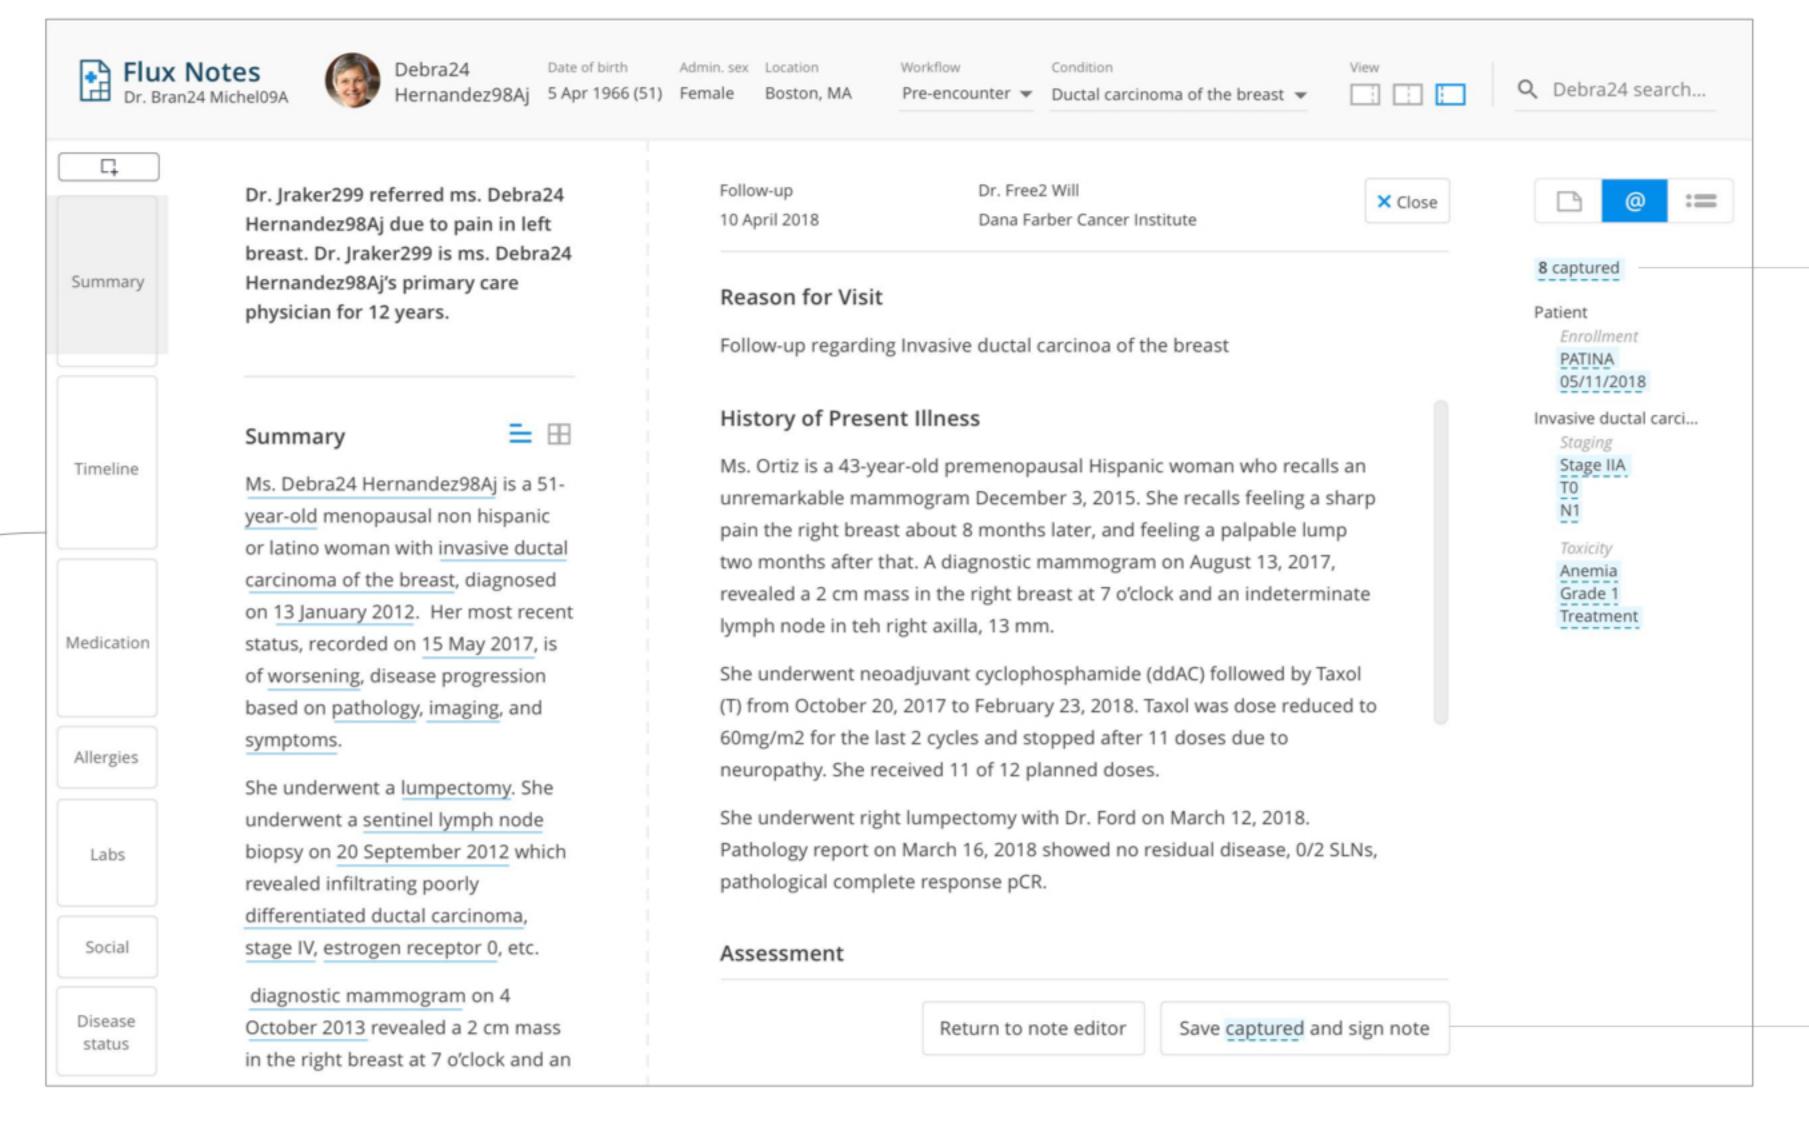

1.2 CLINICAL NOTE CONTEXT TRAY

Hovering (↕) over "_ more" expands to reveal additional data element capture choices

Hovering outside the data element collapses the choices and "_ more" returns.

The context breadcrumb changes as the cursor moves around the note.

1.3 CLINICAL NOTE CONTEXT TRAY

The matching text within the returned search results for adverse event is semi-bolded as visual indication

1.4 CLINICAL NOTE CONTEXT TRAY

In note preview, the right context tray turns into a provider facing health encounter data receipt (a patient version is generated separately and must be designed)

Unfinished captures such as #staging #T0.

are considered unfinished elements

"Save captured and sign note" inserts and saves the tentative captured data elements into the actual patient record

In note preview mode, visual indicators within the note are removed so that the user can view just the written note before signing.

1.5 CLINICAL NOTE CONTEXT TRAY

1.6 CLINICAL NOTE CONTEXT TRAY

2 MEDICATION SECTION

2.1 MEDICATION SECTION
